Worley, K.C.

Direct Submission

Submitted (30-NOV-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 30, 2000 this sequence version replaced gi:10945701.

INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email

only r of GTH: This sequence does not necessarily represent the sert of this clone. Overlapping regions of clones are o and submitted once, so the sequence for the remainder t may be found in the record for the adjacent clones. the insert may be Overlapping clone Features listing LENGTH: entire insert sequenced CLONE

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the

P. Green,

EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html

NEDO human cDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; cDNA full insert sequencing:

Research Association for Biotechnology (RAB); cDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

BHLHB3 2085 Rhesus macaque genomic DNA Macaca mulatta STS 01-JUL-2004

Clone MMA2085, sequence tagged site.

BV208394.1 GI:49533077

STS.

Macaca mulatta

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Primates; Catarrhini; Cercopithecidae;

Cercopithecinae; Macaca.

E 1 (bases 1 to 797)

S Spindel, E.R., Pauley, M., Jia, Y., Boyle, N., Jiang, S., Gravett, C.,

Lupo, S.L., Ali, H., Ojeda, S.R. and Norgren, R.B.

Targeted amplification of the 3' end of rhesus macaque orthologs of human genes

/note="Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not 1; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

/note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M. Fatima Bonaldo. "

/note="Vector: pBluescriptKS(+); Site_l: NotI; Site_2:
FCORV; Genomic DNA was digested with NotI and ECORV and
the resulting fragments were ligated into ZAPII/NotI
vector DNA. After the digestion with ECORV, the mixture
was run on o.8% LMP agarose gel, eluted a gel portion over
22 kb and purified with beta-agarase I. The purified DNA
was digested with NotI, run on 1% LMP agarose gel, and
eluted with Gel Extraction kit the DNA fragments ranging
0.7 to 4 kb, which cover on first-dimensional gel
comprising the central portion of the standard RLGS
profile. The DNA solution was ligated into pBluescript
KS(+) with NotI and ECORV ends. The ligated solution was
transformed into DH5a cell using electroporation machine."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and ECORV sites of the pCMVSPORT 6 vector. Library

/note="Organ: Left Pelvis; Vector: pT7T3-Pac (Pharmacia)
with a modified polylinker; Site 1: EcoR I; Site 2: Not I;
NCI_CGAP_Ch2 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma Grade II. The library
was constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
ACT) He tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2709
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2769

CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa
DNA Sequencing by: Dr. M. Bento Soares, University of Iowa
Clone Distribution: Clone distribution information can be obtained
from Dr. M. Bento Soares, bento-soares@aliowa.edu
The following repetitive elements were found in this cDNA
sequence: 189-213, AT rich#Low_complexity (matched compliment)
Seq primer: M13 FORWARD
POLYA=Yes.

NCI CGAP Ch1 is a cDNA library containing the following
tissue(s): Chondrosarcoma Grade II. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
                                                                                                                                                                                                                                                                                                                                                                                                                                            2976

NCI CGAP_Ct1 is a normalized cDNA library containing the following tissue(s): Osteoarthritic Cartilage The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                      3182
                                                                                                                                                                                                                                                                                                                                                          29-MAY-2002

/note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M. Fatima Bonaldo. "

Molecular cloning and characterization of DEC2, a new member of bas I helix-loop-helix proteins.";

Elochem. Blophys. Res. Commun. 280:164-171(2001).

-!- FUNCTION: May be a transcriptional repressor that represses both basal and activated transcription.

-!- FUNCTION: May be a transcription.

-!- SUBUNIT: Homodimerize.

-!- SUBCELLULAR LOCATION: Nuclear (By similarity).

-!- TISSUE SPECIFICITY: Expressed in skeletal muscle, brain and lung C. -!- SIMILARITY: Contains 1 basic helix-loop-helix (bHLH) domain.

-!- SIMILARITY: Contains 1 orange domain.

"SHARPs: mammalian enhancer-of-split- and hairy-related pr
coupled to neuronal stimulation.";
Mol. Cell. Neurosci. 10:460-475(1997).
-!- FUNCTION: May be a transcriptional repressor that repr
basal and activated transcription.
-!- FUNCTION: Modimerize.
-!- SUBUNIT: Homodimerize.
-!- SUBCELLULAR LOCATION: Nuclear (By similarity).
-!- TISSUE SPECIFICITY: Highly expressed in subregions of moderately expressed in skeletal muscle, heart. Weakly

SUBCELLULAR LOCATION: Nuclear (By similarity)
TISSUE SPECIFICITY: Expressed in heart, brain,
liver, muscle, kidney, uterus and gut.
SIMILARITY: Contains 1 basic helix-loop-helix
SIMILARITY: Contains 1 orange domain.
                                                                                                               Score 684.5; DB 2;

PROACHO
Probable YME1 ATP-dependant proteinase [imported] - Arabidopsis thaliana
NyAlternate names: YTA11 protein homolog T19118.5
C.Species: Atablodpsis thaliana (mouse-ear cress)
C.Accession: T0520; Had&Sc.
Everysion 24-Mar-1999 #text_change 09-Jul-2004
R.Rounsley, S.D.; Kaul, S.; Lin, X.; Ketchum K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, submitted to the EMB1 Data Library, August 1998
A.Pescription: Arabidopsis thaliana chromosome II BAC T19118 genomic sequence.
A.Reference number: Z14681
A.Rolcule type: DNA
A.Resion: T0521
A.Rolcule type: DNA
A.Resion: T0527 cROU-
A.Roos-references: UNIRROR:080983; EMB1.AC004747; NID:g3413696; PID:g3413700

Not. Gen. Genet. 257, 555-605, 1998
A;Title: CPRF44, a novel plant bZIP protein of the CPRF family: comparative analysis of A;Accession: T14911
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Coss: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: MRNA
A;Residues: 1-420 ~kIR>
C;Genteins: J-420 ~kIR>
A;Coss-references: UNIPROT:082037; EMBL:Y10810; NID:g3336904; PIDN:ChA71770.1; PID:g333
C;Genteince: CPRF4b
C;Genteince: CPRF4b
C;Superfamily: fava bean G-box-binding protein; fos/jun DNA-binding domain homology
C;Keywords: DNA binding; leucine zipper
